TEAM 9076

PARTNERSHIP PROPOSITION

Villaciraptors

Collège Villa Maria

2023-2024
First Robotics Competition

OUR STORY

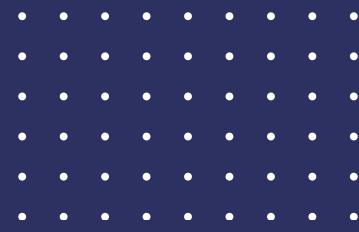

Who are we?

Villaciraptors 9076, a Montreal-based First Robotics team, embarked on its rookie journey just last year. Our humble beginnings featured a handful of enthusiastic students and mentors. Over time, we've transformed, growing to a dedicated team of 40 members spanning grades 7 to 11. Each year, we eagerly embrace the FIRST Robotics Competition, a global contest designed for high school students. Through our experiences and challenges, we continue to evolve and learn, striving for excellence.

Our vision & values

We're dedicated to making robotics accessible to all, regardless of engineering skills. Our inclusive, safe, and supportive environment encourages teamwork, respect, and lifelong skills. These values extend beyond robotics, shaping a culture where every member feels valued and heard. As a new club, we welcome members with any level of experience, ensuring everyone contributes to our robot's creative process in a nonjudgmental atmosphere.

OUR STORY

Our accomplishments

From our modest origins, Team 9076 Villaciraptors has experienced remarkable growth and success, driven by our unwavering team spirit. Starting with just 10 dedicated STEAM enthusiasts, we've been committed to fostering inclusivity for women in these fields.

In our second competition, we achieved "Rookie All Star" and a "Wild Card," which led us to the World Robotics Competition in Houston. Today, our team has expanded to over 40 enthusiastic members from various backgrounds, united by a warm, welcoming atmosphere that keeps us returning year after year. With your support, we're poised for a future filled with even greater achievements.

What is FIRST?

FIRST, established in 2001, is a global non-profit organization fostering student growth in robotics, science, technology, and engineering, while nurturing communication, leadership, and teamwork skills within the robotics community. Notably, they offer the FIRST Robotics Competition (FRC), where student teams create robots for themed challenges and promote STEAM education locally. FIRST supports educators by offering resources and professional opportunities to prepare students for the future.

Future plans & events

This year, our young and motivated team is taking on ambitious projects. To make these dreams a reality, we need your financial support. In December, we're joining the BetaBots competition to introduce new members to robotics. From December to January, we're competing in the First Robotics: Crescendo! competition, hoping to attend both the week 1 regional event and, if possible, the Albany (NY) regional in week 4. These events will connect us with around a hundred teams from across North America and beyond. Your support is crucial for our success.

SPONSORSHIP

How can you help?

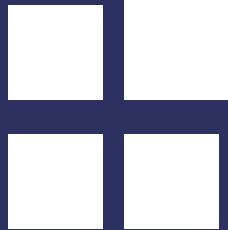

Creating remarkable robots involves significant expenses, and we rely on generous sponsors like you to make it possible! If you opt for a financial donation, your company can benefit from either a tax receipt or the advantages and recognition detailed in our sponsorship package.

Supplies and equipment donations

Our build team depends on a range of costly supplies and equipment to build a new robot annually. If material donations align better with your company, we warmly welcome them. By choosing this option, you will be entitled to receive full recognition and benefits of our sponsorship levels based on the total value of the goods or supplies donated.
